FINELINE MANUFACTURING is the **LEADING** source for Tooling, Fixturing, Welding, Design and Prototyping for the Aviation and Oil & Gas industries. With our extensive background in the design and build of Fixturing, Piece Parts, Test Fittings, Test Stands, Braze & Stack Tooling, Weld Fixtures and Flow Labs for Heat Exchangers, Fuel Heaters, Oil coolers, Actuators, Switches, Antennas, Valves and many more components we can work quickly and efficiently to help the customer gain the edge, put the program online and start generating revenue. When it comes to tooling, fixturing and prototyping we can work and build to the engineers prints or we can assist in the design and build as well as provide part documentation such as prints, solid models and chemical analysis.

What we have found is that in every major company there are 1 or 2 tooling employees that are required to put NPD on each month as well as maintain/repair current tooling for production. At the same time there are 5-10 engineers working on NPD and cost savings fixtures but the tooling employees can not keep up. This is where FineLine has been winning because we can help companies instantly double the amount of projects they can put into production.

Over the last year FineLine has expanded into a full production run CNC and welding shop. We are AS9100 compliant. We can handle production runs of 10 - 20,000. Another unique thing about FineLine is that we will project manage your parts through all processes if that is something requested. We will handle everything from material, machining, welding, bending, heat treating, grinding, painting, assembly, and we now offer water jetting.

OUR GOAL IS THAT *FINELINE MANUFACTURING* BECOMES AN EXTENSION ARM TO YOUR BUSINESS TO ASSIST IN ANY AREA OF ANY PROCESS OR PROJECT.
